Important Notes

- Ensure all sales and cost data are accurate and reflect actual transactions for the reporting period.
- Profit percentage is calculated as $(\text{Profit} \div \text{Total Sales}) \times 100$ for each category.
- Use this report to identify high and low-performing product categories and make informed business decisions.
- Data anomalies or discrepancies should be investigated promptly before final submission.
- This report should be reviewed monthly to track performance trends over time.
