

# Executive Summary of Damage and Loss

## Event Overview

On June 10, 2024, a severe tropical cyclone affected the central coastal region, leading to significant damages across infrastructure, residential, and commercial areas. The disaster resulted in widespread disruption of essential services, impacting over 250,000 residents.

## Key Damages

- **Infrastructure:** Major bridges and roadways were washed out, leading to loss of connectivity for five major towns.
- **Housing:** Approximately 18,000 homes were either partially or completely destroyed.
- **Public Services:** Health facilities and schools reported substantive structural damage, impeding their operations.
- **Utilities:** Prolonged interruptions to power, water, and telecommunications were experienced in several districts.

## Estimated Losses

- **Direct Damages:** USD 520 million in physical infrastructure and assets.
- **Indirect Losses:** USD 180 million in lost production and income across sectors.
- **Early Recovery Needs:** An estimated USD 70 million required for urgent re-establishment of public services and livelihoods support.

## Recommendations

- Immediate allocation of emergency funds for priority repairs and humanitarian support.
- Implementation of resilient reconstruction practices in all recovery efforts.
- Enhanced coordination between local authorities, national government, and international partners.

## Important Notes:

- This document provides a rapid overview and is subject to further verification as more data becomes available.
- Quantitative estimates may change as detailed assessments are completed.
- Executive summaries are used to inform decision-makers and facilitate coordinated response planning.
- Always cross-reference with full assessment reports for more comprehensive details.
