

# Issue-Based Findings Report

## DOCUMENT INFORMATION

**Project:** Sample Project Name  
**Date:** 2024-06-08  
**Author:** John Doe

## SUMMARY

This document presents issue-based findings identified during the project assessment. Each issue is described with its context, impact, root cause, and recommended actions.

## FINDINGS

#	Issue	Description	Impact	Recommendation
1	Incomplete Documentation	Some system modules lack comprehensive user documentation, leading to ambiguity for users and support teams.	Makes onboarding and troubleshooting slower and less effective.	Compile and update module-specific documentation with clear usage guides.
2	Delayed Issue Tracking	Issues are not consistently logged in the tracking system, causing loss of visibility on critical bugs.	Potential for recurring bugs and unresolved support tickets.	Mandate issue logging for all incidents and review compliance weekly.
3	Insufficient Testing Coverage	The current set of automated tests covers only 50% of core features.	Increases risks of undetected bugs in key functionalities.	Expand the test suite to achieve at least 90% coverage on all core features.

## CONCLUSION

Addressing the identified issues will significantly enhance project outcomes and reduce operational risks. Ongoing monitoring and review are recommended to maintain process integrity.

## IMPORTANT NOTES

- This format emphasizes clarity by focusing each section on individual issues.
- It helps quickly communicate the most critical risks and actions to stakeholders.
- Consistent structure enables easier tracking and follow-up.
- Use concise language without omitting necessary technical details.
- Regularly update findings as project circumstances evolve.
