

# Methodology Limitations Report

---

## 1. Introduction

This report outlines the key limitations identified in the methodology utilized within the associated research/project. Transparency about methodological limitations ensures integrity in the interpretation of findings and provides guidance for future studies.

## 2. Identified Limitations

### 2.1 Sampling Bias

The sample population was limited to a specific demographic group, which may restrict the generalizability of the findings to broader populations.

### 2.2 Data Collection Constraints

The data was primarily collected via online surveys, which can exclude participants without internet access and may introduce self-selection bias.

### 2.3 Measurement Limitations

Certain variables relied on self-reported data, which may lead to inconsistencies due to recall bias or inaccurate reporting.

### 2.4 Time Constraints

The study was performed within a limited timeframe, potentially affecting the depth of data analysis and reducing the possibility of longitudinal assessment.

## 3. Impact of Limitations

While these methodological limitations do not invalidate the study's findings, they create boundaries for the scope and interpretation of results. Researchers and stakeholders should consider these factors when drawing conclusions or making recommendations based on this work.

## 4. Recommendations for Future Research

- Broaden the sampling strategy to enhance generalizability.
- Utilize multiple data collection methods to reduce bias.
- Increase the study duration to facilitate more comprehensive analysis.
- Incorporate objective measurement tools where possible.

## Important Notes

- Methodology limitations are an essential component of transparent reporting.

- This document helps readers contextualize findings and assess overall study validity.
- Clearly stated limitations guide future research improvements and replication efforts.
- Limitations should be discussed objectively, without overstating their impact.
