

Glossary

Term	Definition
API	A set of tools and protocols that allows different software applications to communicate with each other.
HTML	The standard markup language used for creating web pages and web applications.
CSS	A stylesheet language used to describe the presentation of a document written in HTML or XML.
Responsive Design	An approach to web page creation that makes use of flexible layouts and images to ensure a site looks good on any device.
Database	An organized collection of data, generally stored and accessed electronically from a computer system.
Algorithm	A set of rules or steps followed by a computer in order to perform a specific task.

- Two-column glossary format improves readability and makes it easy to scan for terms and their definitions.
- Ideal for reference documents, training materials, or study guides where clarity and quick lookup are priorities.
- Consistent styling ensures uniform appearance throughout the document.
- Adding more entries or sections is straightforward due to the tabular structure.
