

# Basic JSON Invoice Template Structure

```
{  
  "invoice_number": "INV-12345",  
  "date": "2024-06-01",  
  "due_date": "2024-06-15",  
  "seller": {  
    "name": "Company Name",  
    "address": "1234 Main St, City, Country",  
    "tax_id": "TX123456"  
  },  
  "buyer": {  
    "name": "Client Name",  
    "address": "5678 Client Ave, City, Country",  
    "tax_id": "CL789012"  
  },  
  "items": [  
    {  
      "description": "Product or Service A",  
      "quantity": 2,  
      "unit_price": 100.00,  
      "total": 200.00  
    },  
    {  
      "description": "Product or Service B",  
      "quantity": 1,  
      "unit_price": 300.00,  
      "total": 300.00  
    }  
  ],  
  "subtotal": 500.00,  
  "tax": 50.00,  
  "total": 550.00,  
  "notes": "Thank you for your business."  
}
```

## Important Notes:

- Structure can be extended with additional fields as needed (e.g. currency, payment terms).
- Make sure to validate JSON format before exchanging documents.
- Field names should be consistent and self-explanatory for interoperability.
- Best practice is to include tax identification numbers for both seller and buyer when required.
- This format is suitable for API integration, electronic invoicing, or digital record keeping.
